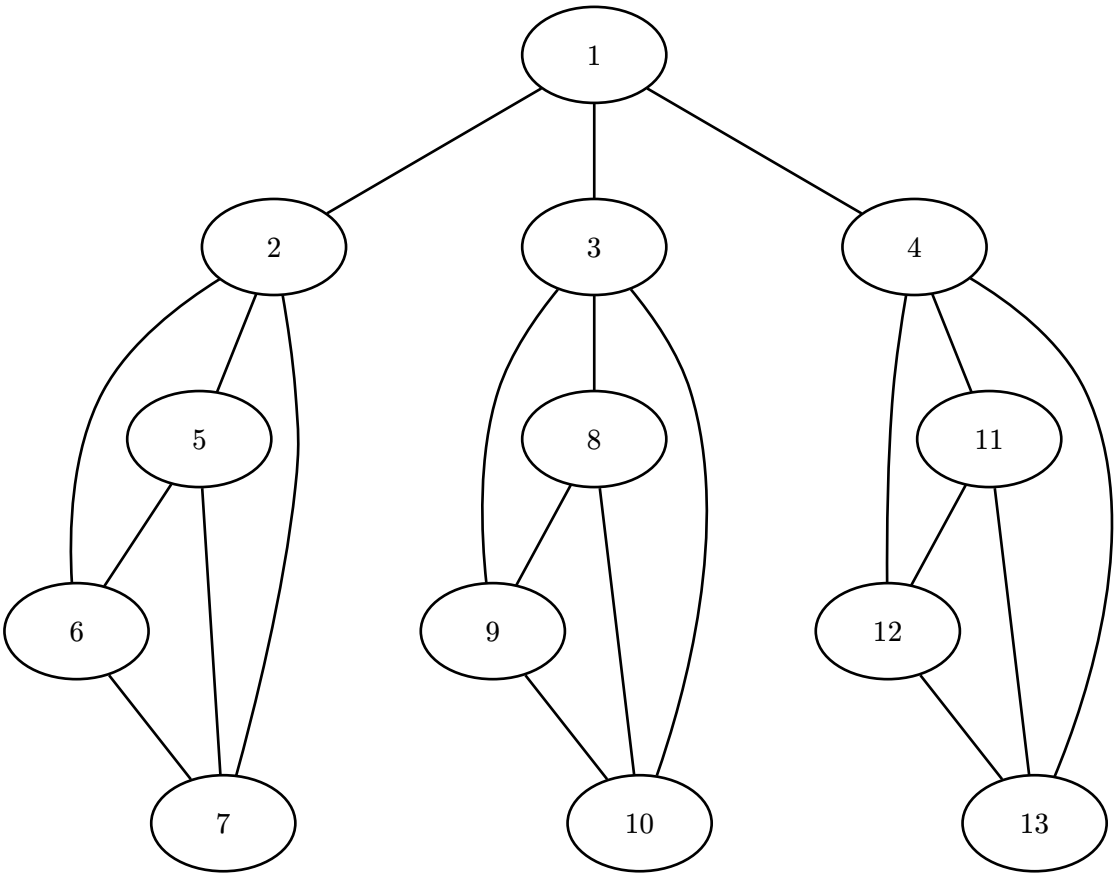
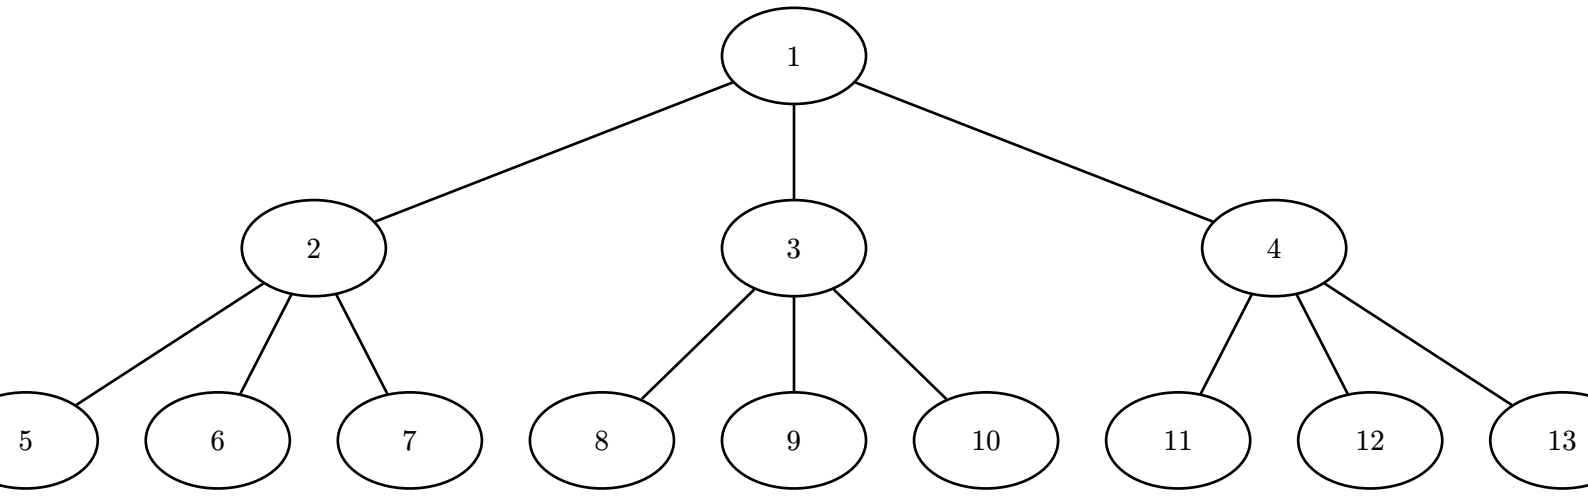
Question 1



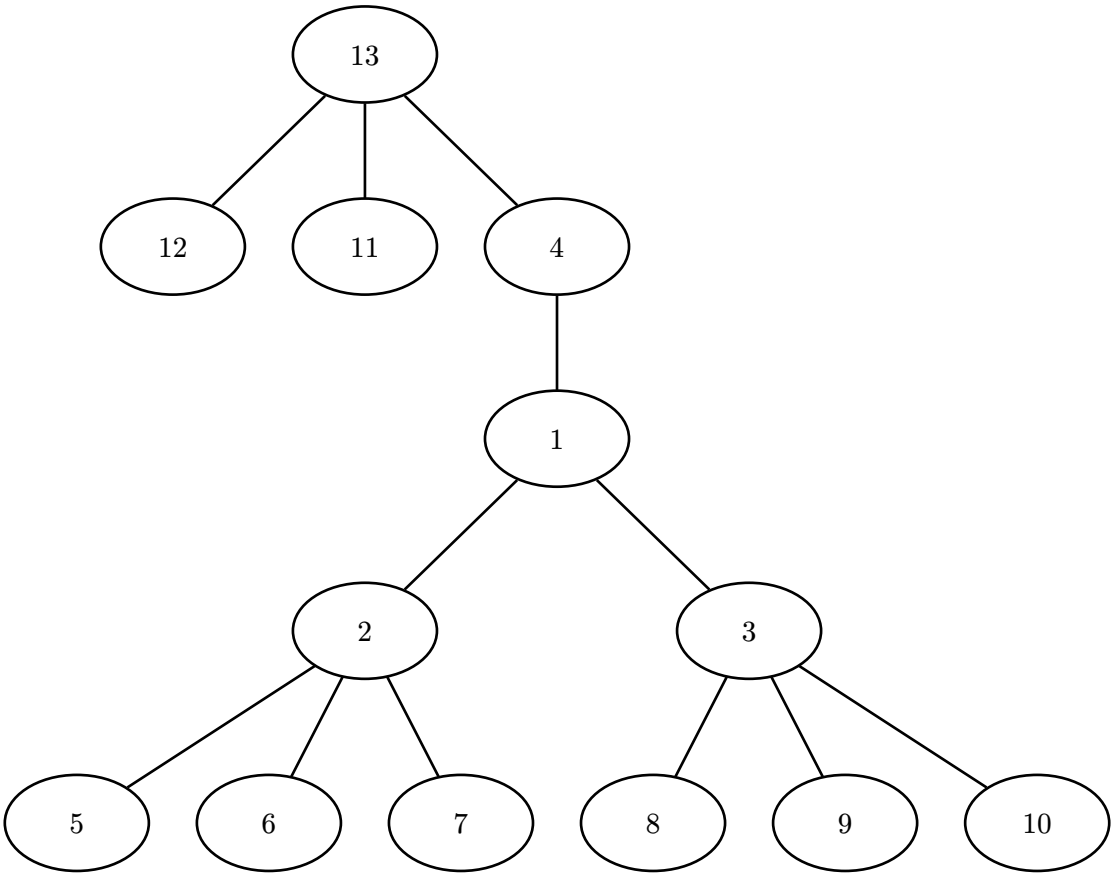
Let us choose node 1 to be the vertex u. We get the following BFS Tree



$\text{ecc}(u) = 2, F_0 = \{1\}, F_1 = \{2, 3, 4\}, F_2 = \{5, 6, 7, 8, 9, 10, 11, 12, 13\}, i = 2, \text{lb} = 2, \text{ub} = 4$

Let us start the BFS traversals from the bottom right

First, we perform BFS on node 13, and get the following BFS tree



$$\text{ecc}(13) = 4 > 2 * (i - 1), \text{since } i = 2$$

Thus, we terminate the BFS and find that the diameter is 4.

We required a total of 2 BFS calls in this example.
