

# Introduction to Algorithm Engineering

## Homework-1

Moida Praneeth Jain, 2022101093

### Question 1

Let us choose node 1 to be the vertex  $u$ . We get the following BFS Tree

$$\text{ecc}(u) = 2, F_0 = \{1\}, F_1 = \{2, 3, 4\}, F_2 = \{5, 6, 7, 8, 9, 10, 11, 12, 13\}, i = 2, \text{lb} = 2, \text{ub} = 4$$

Let us start the BFS traversals from the bottom right

First, we perform BFS on node 13, and get the following BFS tree

$$\text{ecc}(13) = 4 > 2 * (i - 1), \text{ since } i = 2$$

Thus, we terminate the BFS and find that the diameter is 4.

We required a total of 2 BFS calls in this example.

## Question 2

Commands used:

- `lscpu`
- `dmidecode`

### CPU

Architecture	x86_64
Op Modes	32-bit, 64-bit
Address sizes	48-bits physical, 48-bits virtual
Byte order	Little Endian
CPUs	16

VendorID, Model Name	AuthenticAMD, AMD Ryzen 7 5800H
CPU Family	25
Model	80
Threads per core	2
Cores per socket	8
Sockets	1
Max MHz	4463
Min MHz	400
Cache size KB	512

Memory Hierarchy

	L1	L2	L3
Size	512 KB	4 MB	16 MB
Associativity	8-Way Set Associative	8-Way Set Associative	16-Way Set Associative
